Power Up Your Cyber Security Team With the World's Leading Cyber Readiness and Skill Development Platform

Maximize Cyber Readiness with Hyper-Realistic Simulation

Cyber Range Team Exercises

Accelerate Employee Onboarding

Improve Hiring and Retention

Assess and Benchmark Performance

Create an Elite Cyber Defense Team

The profile of the next-generation cyber defender has completely changed. SOC and incident response teams must be equipped with a new set of skills that include malware analysis, cloud security, knowledge of security tools as well as the latest threat vectors and MITRE ATT&CK tactics.

The next-gen cyber defender is a "first responder" fully capable of working in a team, communicating and collaborating with teammates and management during an incident, equipped with critical thinking skills and fully capable of working under pressure.

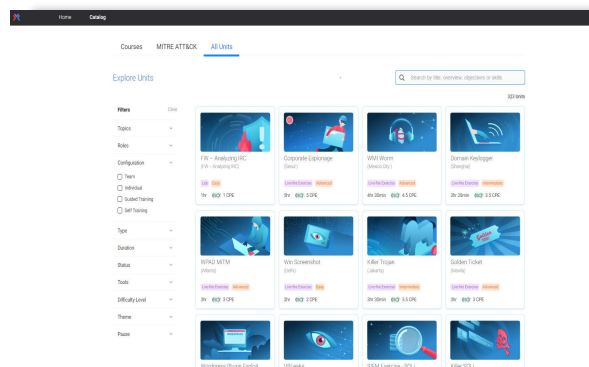

Today's attacks are inevitable, but can be mitigated by strong cyber defense teams. However, most information security teams build their skills on the job, or in bi-yearly exercises.

The Cyberbit platform introduces the concept of hyper-realistic skill development. By simulating real-world threat vectors in live networks, and allowing your team to respond using commercial security tools, information security leaders can build elite cyber defense teams and continuously maintain their skills anytime, wherever they are. The Cyberbit platform delivers over 500,000 exercises every year to F500 organizations, governments, military organizations and learners worldwide.

On-Demand, Up To Date

Cyberbit is a cloud-based SaaS platform allowing your team to instantly run cyber labs and live-fire cyber range exercises and courses, from any location.

The platform is updated with the most recent new attacks immediately, so your team always stays up to date with the latest threats.

Cyber Labs Develop Fundamental Skills

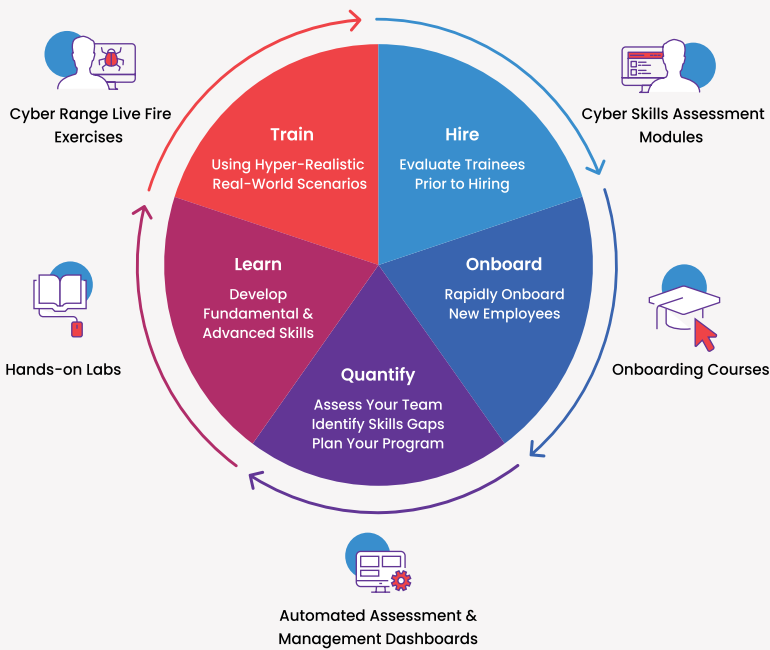

Purpose built hands-on skill development modules, called Cyber Labs, ensure your team develops and perfects the skills required to excel in their roles. From networking to threat hunting and incident response, across the entire MITRE ATT&CK Framework, your team members will gain the essential skills required to maximize performance. Exercises are updated on a weekly basis, ensuring your team stays up to date with the most recent threats

Live-Fire Exercises Build Experience

Cyberbit is the only platform to include a full-scale cyber range, delivering a hyper-realistic environment including massive corporate networks simulating both IP and cloud networks , reverse engineered live-fire attacks, and commercial security tools from leading vendors.

Crisis Simulation Prepares the C-Suite

Prepare for a cyber crisis like never before by bringing together your executive and Cyber Defense teams, to dynamic, collaborative exercises. Replace traditional tabletops with interactive, non-linear experiences that helps ,management teams including CISO, CIO, CEO, CFOs, PR, and more, practice decision making, and allowing you to validate incident response playbooks at the organizational level.

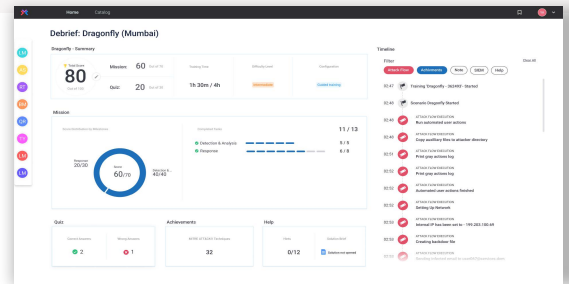

End-to-End Courses

Cyberbit includes pre-built and customizable courses to both develop your team's skills as individuals and their ability to work as a team during a live incident. Including both cyber labs and live-fire exercises, Cyberbit courses ensure your team develops the skills required in a timely, measured, manner.

Automated Performance Based Measurement

Define and track your teams KPIs with continuous, action-based evaluation in both cyber labs and live-fire exercises on the cyber range. Sensors built into the learning environments track trainee activity, ensuring the most accurate look possible at your teams' activity.

Delivering Over 500,000 Hours of Training Annually
